POWER SEAT ELEVATION
CONSUMER BENEFITS

GROUP 2 STANDARD & HD

merits

Enhancing life through mobility.

A Reimbursable Benefit That Truly Elevates Care

ELEVATE

Seat elevation is more than a mobility upgrade — it's a clinically significant function that improves safety, reduces injury risk, and supports independence in daily life.

With Merits' **Vision Sport**, **Vision Super**, & **Dualer** you gain:

- Power wheelchairs that meet clinical standards
- Practical serviceability for long-term use
- Built-in features that match user needs and support therapy outcomes

Supports Safer Transfers

Transfer safety is a top priority. Being able to raise the seat to match the transfer height can:

- Reduce fall risk
- Increase user independence and stamina
- Minimize caregiver strain and injury

Improves Access to Environments

Seat elevation allows users to reach items on shelves, counters, or cabinets, empowering them to:

- Prepare meals
- Maintain hygiene routines
- Perform household tasks

Promotes Social and Psychological Wellness

Elevating to eye level during conversations or group settings:

- Improves communication and visibility
- Reduces feelings of isolation
- Supports dignity and self-esteem

Reduces Long-Term Injury Risk

Poor ergonomics during transfers can lead to injuries over time. Seat elevation aligns the user with surfaces and supports:

- Proper transfer mechanics
- Less strain on shoulders, wrists, and spine
- Prevention of long-term joint damage from unsafe movement patterns
