

LATERAL PELVIC/ THIGH SUPPORT

PC's pelvic/thigh supports are universal and can accommodate all users with varying muscle tone and positioning needs.

Its adjustable hardware and multiple pad options can be configured for leg adduction and/or pelvic rotation.

This versatile solution is engineered for optimal lower extremity alignment, promoting pelvic stability for effective postural control.

Key features / Clinical justification

Correct or prevent hip abduction/external rotation and secure pelvic stability

Varied offset range to accommodate windswept position

Support lower extremity alignment to promote better pressure distribution

HPCPS E1028 / E1034 for lateral hardware, E0956 for positioning pads (Coming Soon)

Specification

- 1.25" extension length
- ~1.25" offset
- Withstands user weight up to 300lbs
- Meets ISO16840-3 requirements

Available Pad sizes

3"x5"
4"x6"
4"x8"
4x12"
